

Fluo+ Module

Software Module for Multi-Color Fluorescence Imaging

Fluo+ is an additional multi-color fluorescence imaging software module for QuickPHOTO programs. Up to 8 digital images acquired using different fluorescence filters can be composed to a single multi-color image.

Example of image composition using Fluo+ module

Functions Overview:

- Up to 8 digital images acquired using different fluorescence filters can be composed to a single multi-color image.
- Intensity of each of the fluorescence images can be adjusted independently.
- X and Y shift correction for each image.
- Color of each of the fluorescence images can be changed.
- Module settings can be saved to a file and loaded anytime.

System Requirements:

- QuickPHOTO CAMERA, MICRO, Industrial in version 2.2 or higher.
